

# MATH TALKS: +/- TENS & ONES

Using math talks in the classroom is a great way for students to begin to understand math in a more *conceptual* way! It can be easy to put up a math question and think you are hosting a math talk but remember... the most important part is having your students **meaningfully TALK** about the concepts. A math talk is something that should take place every day in your classroom for about 3-5 minutes per day! See more about how to do this below:

I have 4 phrases that I use in my K-2 classroom all the time to foster meaningful math conversations. The four phrases

I love to use are:

- Tell me more...
- What did \_\_\_\_ say?
- Do you agree/disagree? Why?
- Could you solve this a different way?

You can see more about each phrase and **WHY** they're important in my video below:

**Adding/subtracting 10s and 1s:** In this math talk pack, students will work on identifying two-digit numbers then adding 10s and 1s to that number (without regrouping). The slides already have the animation feature to scaffold and allow students to identify the # first, then add or subtract and share how they got their answers.

7 What's the sum?

+ 20

The slide has a pink header with a cartoon girl holding a large blue number 7. Below the header, there are two vertical rods of ten blue blocks each, and two groups of ten single blue blocks each. To the right of the blocks is the text "+ 20".

*There are editable slides at the end of the unit for each of the different kinds of math talks. You can simply use the add text tool to make your own!*

# +/- TENS AND ONES:

Adding and Subtracting 10s and 1s: In this math talk pack, students will work to review identifying 2 digit numbers and adding/subtracting multiples of tens and ones from these numbers. The skills become progressively more difficult as students work.

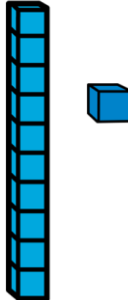

What's the su

**+ 20**

What's the difference?

**- 10**

**NUMBER detectives**

27	17	28	23	35
18	43	15	37	8
25				
33				

**+10**  
**-10**
